

## Which Packing Tape Should I Use?

Use this handy guide to help with your decision. We have a wide selection of tapes available for many different applications. First select the backing to your tape and then the adhesive you require.

### Backing

Polypropylene (PP)	Vinyl	Kraft Paper
Cheapest material used for every day packing.	Premium material that has very high strength and better tack due to it only being available with a solvent adhesive	Environmentally friendly material that is suitable for everyday use. Paper equivalent to polypropylene.

### Adhesive

Acrylic	Hotmelt	Solvent	Water Activated
Ideal for everyday use, generally the cheapest and most economical adhesive	Characterised by better initial tack than acrylic and higher break resistance	Most aggressive adhesion, works in colder conditions than acrylic or hotmelt and remains effective at temperatures down to minus 15 degrees centigrade.	Made from 100% natural starch and is the most environmentally friendly adhesive. Water bonds with the parcel itself creating a tamper proof seal and very strong adhesion.
